

The purpose of this function is to return a line from the file each time the function is called

I USE THE READ FUNCTION TO READ FROM THE FILE
READ TAKES AS A PARAMETER:
- DESCRIPTOR FILE
- BUFFER SIZE
- BUFFER

I HAVE A STATIC INDEX OF TYPE INTEGER WHICH ALLOWS ME TO KNOW WHERE I AM IN THE BUFFER AT IN THE PREVIOUS CALL OF THE FUNCTION.
THE INDEX IS INITIALIZED TO ZERO ON THE FIRST CALL OF THE GET_NEXT_LINE
